Anywhere headphones & earphones

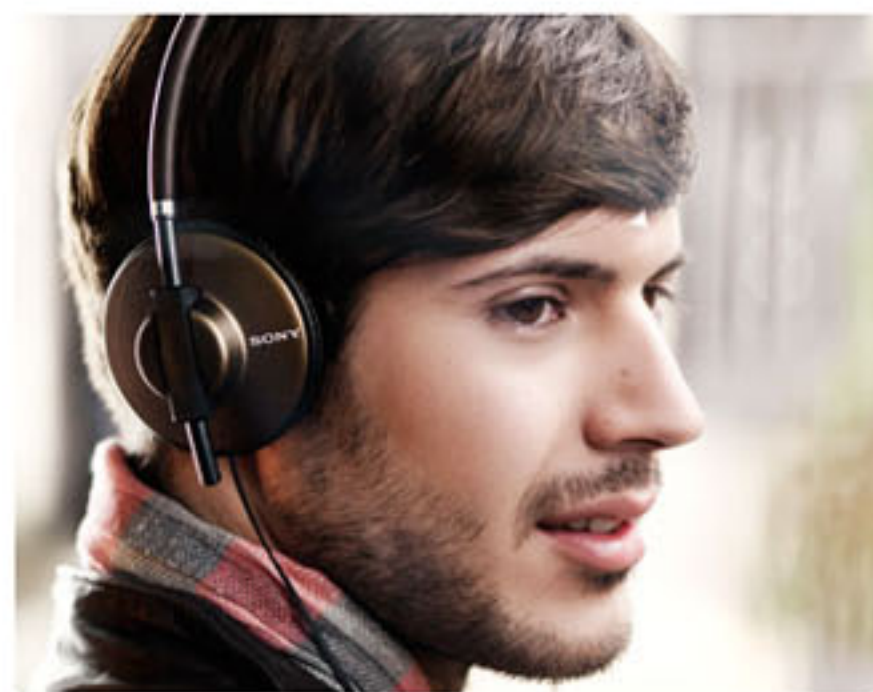

Whatever you're up to, Sony headphones and earphones will enhance your enjoyment of any MP3 player. They've got comfort, great looks and studio quality sound. Our passionate engineers are continually refining the range, they concentrate on every tiny aspect of the technology, such as testing sound isolation with 500 rubber ear moulds. All in the name of pristine audio reproduction.

Headphones & earphones for your MP3, iPod or Walkman

Superior sound & design

If you use an iPod, iPhone, Walkman or any other music player, Sony MP3 headphones will help you get the most from it. Our wide range of headphones and earphones has something for you whether you prefer in-ear, over-ear or neckband styles. For those whose priority is good looks, we have stylish headphones in a range of colours - or if you want practicality, how about folding overear headphones with a retractable cord?

Upgrade earphones and enhance your sound

Enhance your iPod or MP3 player

Your iPod, Walkman or MP3 player can sound even better with Sony headphones and earphones. Whether you choose in-ear or over-ear headphones, you'll get everyday comfort and superior sound that stems from meticulous attention to detail. This pursuit of perfection has driven us to create the largest ever audio driver for richer sound, and change our earphones' angle of fit for more comfort, a slimmer profile and less sound leakage.

iPod replacement headphones with superb sound

Look as good as they sound

Now you can get superb Sony sound quality in a beautifully designed package. Our headphones were created with style in mind: choose from clean designs, slimmer headbands and a range of vibrant colours. Perfect if your look is as crucial as your music!

Fashion designs and colours: get the look

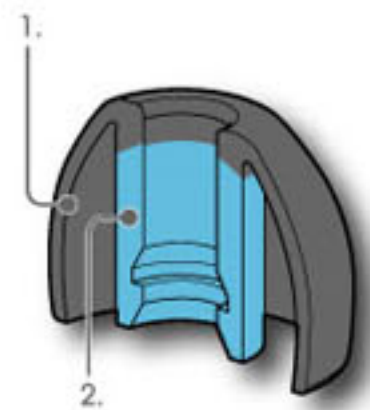

Tiny tech gives big sound

Sony engineers are constantly refining our products. They've worked out how to squeeze in the largest-ever driver (16mm) into our earphones: keeping them supremely comfortable yet with rich sensitive audio. They've created a unique multi-layered material to cut down distortion without adding bulk, and introduced strong, lightweight magnesium (used in helicopter construction) to reduce vibration and weight, and increase durability.

Superb sound starts here

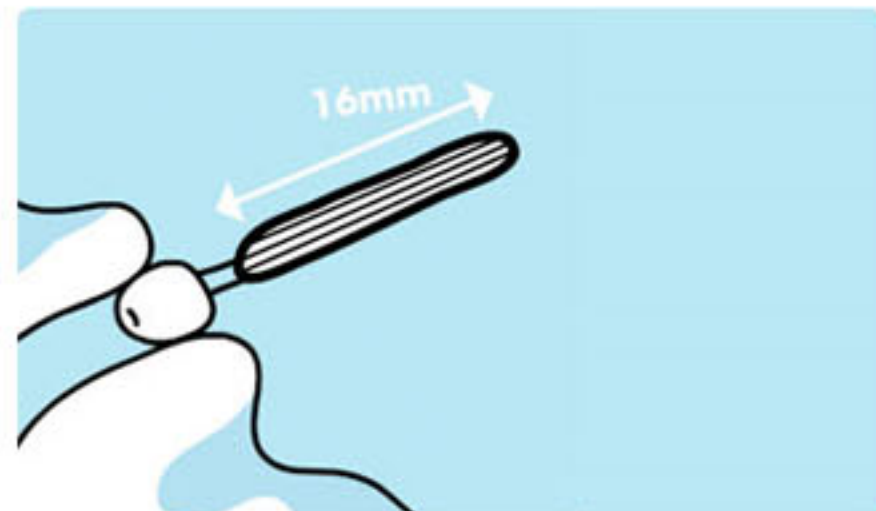

A perfect fit keeps sound in

Our earphones include hybrid silicone ear buds made from two different materials. The harder, denser core holds its shape to prevent sound leakage, while the softer low-density outer improves fit and comfort. Plus our ear buds come in seven sizes to ensure you get a perfect fit - and keep your sound in.

1. Low-density silicon outer
2. High-density silicon core

Our closest fitting earphones yet

Superior in-ear performance

Our engineers went one step further to redefine the boundaries of in-ear headphone technology.

Find out about the EX monitor vertical driver

Rubber ears

Only by creating a huge library of ear moulds can we get the fit and performance exactly right in every pair of in-ear headphones.

EXTRA Bass & DJ headphones

If you're a professional or simply a music-lover, you'll love the DJ and EXTRA BASS models in the Sony headphones collection. Our DJ headphones give you the sound quality, comfort and features of studio headphones, while our deep bass headphones have been designed to deliver smoother vibrations and extra detail in low frequencies.

Headphones offering studio quality sound & extra punchy bass

Serious about sound

With sublimely detailed audio quality, total isolation and flawless performance, our EXTRA BASS and DJ headphones are serious about sound. The XB's extra-large driver and Direct Vibe structure guarantees ultra-low frequency without sacrificing delicate high-resolution detail. Our DJ headphones combine studio-quality audio with expert features like long leads and swivel cups for easy movement and monitoring.

EXTRA BASS, extra comfort

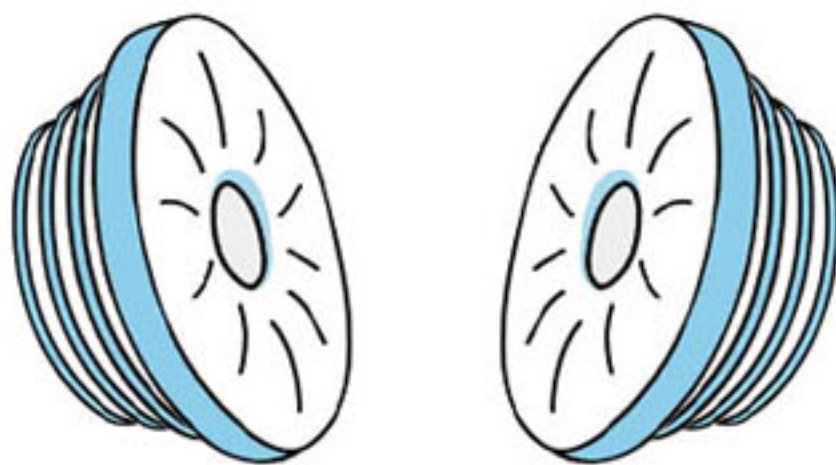

The XB series is designed to give you the fattest deep low sound around. The cups are adorned with king-size artificial leather ear cushions and pressure-relieving urethane to give luxurious listening, while the design emphasises their intelligent sound with hairline finished aluminium and a seamless flat headband. Combined with extreme bass capabilities, XB is a winner for club music fans.

[Keep the beat](#)

Designed for DJs

Our DJ range are monitor headphones suitable for professional use, from the studio-quality sound to the extras that make monitoring beats simple. The reversible ear cups for single-sided DJ monitoring have an automatic swivel mechanism that returns them to position. They come complete with long leads and unmatch plug for use with a range of music equipment.

[Listen like a DJ](#)

Extreme bass

Not even high quality modern headphones can deal with the deep booming bass of urban, hip hop and club music. Enter our revolutionary EXTRA BASS headphones. The XB effect comes from combining two technologies that were specifically created for bass lovers: our Extra Bass Drive Unit for faster response to driving bass lines, and the Direct Vibe structure to prevent sound leakage.

[Capture all the bass](#)

Reinventing the driver

Our sound engineer's love for club music led him to the conclusion that most modern headphones can't handle the big bass lines of dance tracks. Designing the new XB driver meant visiting a lot of clubs and working closely with DJs to come up with a new approach: the EXTRA BASS Drive Unit. This has a long-stroke diaphragm that accurately reproduces ultra-low frequency tones: its extra corrugations let it react quickly to deliver a deep fat sound.

[Get superb low-frequency sound](#)

Evolutionary bass

R&B, hip hop, dub, drum 'n' bass, reggae... Musical styles have evolved, so why not headphones?
